The length of the menstrual cycle is the number of days between the first day of one period and the first day of the next period. In most women, it is about 28 days. The length of the cycle between 21 to 35 days is considered to be normal. The menstrual cycle is too short if your menstruation starts 21 or even fewer days after the onset of your previous period.

## **24 Top Questions About Your Menstrual Cycle Answered**

Menstrual flow might occur every 21 to 35 days and last two to seven days. For the first few years after menstruation begins, long cycles are common. However, menstrual cycles tend to shorten and become more regular as you age. Your menstrual cycle might be regular — about the same length every month — or somewhat irregular, and your period might be light or heavy, painful or pain-free, long or short, and still be considered normal.

The events of the menstrual cycle that take place in the ovaries make up the ovarian cycle. It includes the follicular phase (when a follicle and its egg mature due to rising levels of FSH), ovulation (when the egg is released from the ovary due to a rise in estrogen and a surge in LH), and the luteal phase (when the follicle is transformed into a structure called a corpus luteum that secretes progesterone).
