### PASS PLANT UNIT STUDY GUIDES - SOUTH CAROLINA 6TH GRADE ...

Plants use a gas in the air called carbon dioxide and release oxygen. The third thing plants need for photosynthesis is water. Plants get water from the soil through the roots. The last thing that plants need for photosynthesis is sunlight. Sunlight is the energy for the plants that helps it change carbon dioxide into food for the plant.

Study Guide 1. The student will investigate and understand basic plant anatomy and life processes. Key concepts include: a) the structures of typical plants (leaves, stems, roots, and flowers), b) processes and structures involved with reproduction (pollination, stamen, pistil, sepal, embryo, spore, and seed, c) photosynthesis (sunlight, chlorophyll, water, carbon dioxide, oxygen, and sugar ...

### **Life Processes - Plants SOL 4.4 - Mrs. Murray's Fourth ...**

Inside plant cells, you can see a chloroplast (green ovals) that take energy from the sun and convert it into sugar, which is then used as food by plant cells. In plant, fungi, and bacteria cells you can see a thick cell wall which gives them structure and protection. The cell wall does NOT however control what enters and leaves the cell.
