calculus. The number of contacts per infective each day is given by  $a = c \cdot b$ , because  $b$  equals  $1/(\text{the number of days infectious})$ . This means that if  $I$  people are infectious on a particular day,  $a \cdot I =$  the total number of adequate contacts per day Only the contacts with susceptible people result in a new case of the disease, so we multiply this total

### Chapter 2 Using Calculus to Model Epidemics

Offered by The University of Sydney. The focus and themes of the Introduction to Calculus course address the most important foundations for applications of mathematics in science, engineering and commerce. The course emphasises the key ideas and historical motivation for calculus, while at the same time striking a balance between theory and application, leading to a mastery of key threshold ...
