The substantiation that a model is valid, i.e., performing model verification and validation, is generally considered to be a process and is usually part of the (total) model development process. It is often too costly and time consuming to determine that a model is absolutely valid over the complete domain of its intended applicability.

### VERIFICATION AND VALIDATION OF SIMULATION MODELS

Verification: the process of determining that a model implementation accurately represents the developer's conceptual description of the model and the solution to the model.
